

ASTILBE ARENDSII

Saxifragaceae / Garden Spirea

Well-known perennial suited as a bedding plant or for cutting. Sow February - March. Transplant outdoors in pots. Forcing on 15 °C can be started in March the second year. Water abundantly to reach flowering. First flowering occurs from May onwards. This strain can be planted out later on and will perform very well in the garden over many years.

A696 'Bella', 50 cm, colourful mixture with strong flowers. 
Suited for 11 - 15 cm pots.

'Astary'

This new series of seed raised Astilbe requires no vernalization; it can be programmed for year round production in 10 to 12 cm pots. The flowering is uniform and the plants are genetically compact (20 - 25 cm).

- A685 'Astary Pink', light pink.
- A686 'Astary Rose', dark rose.
- A687 'Astary White', pure white.
